

## **\$\$ & Sense Fights Greenhouse**

1. **Change your Super** – Check whether your fund has a Sustainable or Eco option or check <https://aodproject.net/pension/>. Migrating your Super is easy and protects your nest egg from declining fossil fuel assets. When money talks, even climate sceptics listen.
2. **Check your Insurance** – Make sure your insurance premiums are not invested in fossil fuels that are increasing your risks. Check <https://aodproject.net/insurance/>.
3. **How you bank** – Open an account with a credit union or on-line ethical bank. Gradually migrate your accounts away from banks backing fossil fuels.
4. **Where you shop** – Send an e-mail or write a facebook post telling them when you get an e-car they will have to provide solar recharging if they want your business.
5. **Tweed Council** – E-mail the General Manager or contact a councillor to tell them you want more action on renewable energy not more reserves in bank accounts.
6. **Local MP**- E-mail or write a post to your State MP, Geoff Provest and tell him he is not representing you because you want real ambition on emission reductions now.
7. **Your Home**- Switch to a renewable energy provider like ENOVA or “Better Power”. Install storm strapping, plant deciduous vines on western faces, consider heat reflecting roof paint and tell your neighbours you are preparing because more extremes are coming...
8. **Social Contacts**- Don't let the sceptics make global warming the forbidden subject. Stand up for your future, whether it is on line or in passing conversation.
